

MOTHER NATURE CALLS IT A SEASON:
LEVEE ROCK PLACEMENT TO GET BACK UNDERWAY IN THE SPRING!!
MEANWHILE, STORM SANDBAGS AVAILABLE AS INDICATED BELOW...

Rock Placement Program

01/6/2017_— Already well into what promises to be a wet winter, our enhanced rock placement program has finally had to be called to a halt for this season. Once levee conditions again enable it to get back underway in earnest this coming Spring, you'll see more of the same as represented in the surrounding photos of 2016 rock placement activity (which shall therefore serve the purpose of future "coming attractions" in 2017).

Meanwhile, above all else, beginning this Spring please also keep an eye out for our customary 2-week notice of our doing work along your portion of the levee (posted below), and take serious heed to follow its instructions to:

- trim back or remove all vegetative or other items from the levee that would obstruct passage of BIMID vehicles; and
- once again, turn off your sprinklers well before we arrive on site to give the levee ample time to dry out, and to therefore help prevent our heavy equipment from damaging your or anyone else's property!

Winter Storm Preparations

We meanwhile wish all of you a great New Year, and also remind everyone that during storm conditions, sandbags and sand are once again available at:

- *2 loads each to be located outside the gates on the Bethel Island Road and Piper Road sides of the BIMID Mitigation Site, with at least 50 sandbags (covered with visquine) and 2 shovels available to be replenished as needed at each site.*
- *1 load, covered and with 2 shovels, to be located on Ranch Lane between Delta Coves property and Scout Hall*
- *1 load, covered with 2 shovels, to be located in the North Taylor Road vicinity of the BIMID pumping station near New Life Marina and/or Donnelly property*
